Scrambler 500 4x4 (1997-2000)

Bob Mizon, one of the world’s best known campaigners against the veil of light pollution that has taken away the starry sky from most of the world’s population, takes readers to a hundred places in the UK and the USA where the wonders of the night sky might still be enjoyed in perfect or near-perfect night skies. Visiting small hotels and simple campsites, and savoring vast dark-sky reserves where the night sky is actively protected, The Million-Star Hotel celebrates the black skies of yesteryear – which may become a reality for more and more of us as modern technology reins in lighting and puts it only where needed. How can you prepare for your stay beneath the stars? What astronomy can you do during the daytime? What kind of equipment will you need? Questions such as these are answered, and if town dwellers return inspired – and, Bob hopes, also inspired to look with fresh eyes at their own local lighting – there is enough information here for them to equip themselves for some urban astronomy too.

Become a better long-range shot! How well can you shoot at 200 yards? 500? How about 1,000? L.P. Brenzy has taught many shooters the art of accurate, long range rifle work, and in Gun Digest Book of Long-Range Shooting he shares the skills and practice techniques that will put you on target. You learn: How to select the best rifle and caliber to make the shots you want to make How to select the proper bullet and loading information to get the best performance Practice techniques and how to keep the edge needed to routinely make long, accurate shots How to make accurate distance judgments without the use of high dollar electronics How to know your limitations in hunting situations and make ethical shots

Scrambler 500 4x4 (1997-2000)

This book makes good background reading for much of modern magnetospheric physics. Its origin was a Festspiel for Professor Jim Dungey, former professor in the Physics Department at Imperial College on the occasion of his 90th birthday, 30 January 2013. Remarkably, although he retired 30 years ago, his pioneering and, often, maverick work in the 50’s through to the 70’s on solar terrestrial physics is probably more widely appreciated today than when he retired. Dungey was a theoretical plasma physicist. The book covers how his reconnection model of the magnetosphere evolved to become the standard model of solar-terrestrial coupling. Dungey’s open magnetosphere model now underpins a holistic picture explaining not only the magnetic and plasma structure of the magnetosphere, but also its dynamics which can be monitored in real time. The book also shows how modern day simulation of solar terrestrial coupling can reproduce the real time evolution of the solar terrestrial system in ways undreamt of in 1961 when Dungey’s epoch-making paper was published. Further contributions on current Earth magnetosphere research and space plasma physics included in this book show how Dungey’s basic ideas have remained explanative 50 years on. But the Festspiel also introduced some advances that possibly Dungey had not foreseen. One of the contributions presented in this book is on the variety of magnetospheres of the solar system which have been seen directly during the space age, discussing the variations in spatial scale and reconnection time scale and comparing them in respect of Earth, Mercury, the giant planets as well as Ganymede.

Incorporating developments from both academia and industry, this exploration of brands, brand equity and strategic brand management combines a theoretical foundation with numerous techniques and practical insights. Suitable for both graduates and upper-level undergraduates.
