5% 5-Fluorouracil cream for the treatment of small ...

It is a rarely employed and actually works. Although 5-fluorouracil is the most common intralesional chemotherapeutic option for BCC and SCC, many other agents have been shown to be as effective. They include bleomycin and various interferon subgroups. For squamous cell carcinomas, intralesional methotrexate has also been shown to be effective.

Intralesional 5-fluorouracil for Cutaneous BCC and SCC ...

5-FU (5-fluorouracil) is a highly effective and well-tolerated treatment used for superficial squamous cell carcinomas and squamous cell carcinomas in-situ. Imiquimod has been the mainstay for topical treatment of superficial basal cell carcinomas. However, when some patients fail to mount a response with application of imiquimod, 5-FU becomes an excellent option for topical treatment for basal cell carcinomas. This patient illustrates this scenario.

Topical 5-fluorouracil and Imiquimod Efficacy in Basal and ...

SCOTTSDALE, ARIZ. - Although 5% 5-fluorouracil cream received Food and Drug Administration approval for treatment of superficial basal cell carcinoma nearly 4 decades ago, the cream is underused for that indication today, even though it is very well tolerated and is particularly beneficial as an alternative to surgery for many patients, Leon H. Kircik, M.D., said at a meeting sponsored by the Skin Disease Education Foundation.

Fluorouracil topical (for the skin) is used to treat scaly overgrowths of skin (actinic or solar keratoses). Fluorouracil topical may also be used in the treatment of superficial basal cell carcinoma. Fluorouracil topical may also be used for purposes not listed in this medication guide.

Fluorouracil topical Uses, Side Effects & Warnings - Drugs.com

5-fluorouracil (5-FU): The drug most often used in topical treatment of actinic keratoses, as well as some basal and squamous cell skin cancers, is 5-FU (with brand names such as Efudex, Carac, and Fluoroplex). It is typically applied to the skin once or twice a day for several weeks. When put directly on the skin, 5-FU kills tumor cells on or near the skin's surface, but it can't reach cancer cells deeper in the skin or those that have spread to other organs.
