Evidence-Based Approaches to Treating Adolescent Substance Use Disorders. Research evidence supports the effectiveness of various substance abuse treatment approaches for adolescents. Examples of specific evidence-based approaches are described below, including behavioral and family-based interventions as well as medications. Each approach is designed to address specific aspects of adolescent drug use and its consequences for the individual, family, and society.

Evidence-Based Approaches to Treating Adolescent Substance ...

This article reviews the epidemiology, etiologic risk and protective factors, and evidence-based approaches that have been found to be most effective in preventing adolescent substance use and abuse. Exemplary school- and family-based prevention programs for universal (everyone in population), selected (members of at-risk groups), and indicated (at-risk individuals) target populations are reviewed, along with model community-based prevention approaches.

A study conducted between 2012 and 2014 by the National Institute on Drug Abuse surveyed the use of substances each year by adolescents between the ages of 12 and 17. 1 This study revealed that on average 1: 25% of teenagers used alcohol. 13.3% used marijuana. 10% used tobacco.

MET/CBT: Treatment of Adolescent Substance Abuse

Most adults who develop a substance use disorder report having started drug use in adolescence or young adulthood, so it is important to identify and intervene in drug use early. Adolescents can benefit from a drug abuse intervention even if they are not addicted to a drug. 18 Substance use disorders range from problematic use to addiction and can be treated successfully at any stage, and at any age. For young people, any drug use (even if it seems like only "experimentation"), is cause ...
