"If we are to solve many of the problems facing us-in the cities, in the wild areas of the earth, in the atmosphere, and the oceans-we shall need the help of skilled users of GIS technology. If readers can master what is in this volume, they will be well started on this enterprise." -From the Foreword by Jack Dangermond President of ESRI Praise for previous editions: "One of only a small number of texts devoted to the technology of GIS that are truly introductory in nature. . . . Very readable and of moderate length. Those who are real novices to GIS will find this one attractive." -Computers and Geosciences "Well-rendered and very clear line drawings . . . well written, with a well-balanced blend of technical/theoretical concepts and more applied facts of GIS." -Professional Geographer Geographic Information Systems provides a practical, theory-driven overview of GIS that is supported with clear coverage of basic techniques. This treatment enables readers to understand the broad aspects of GIS without focusing on a specific software or discipline, such as engineering or geography. New features of this Third Edition

Advances in information technology provide opportunities for the development of computer systems that support risk managers in complex tasks. Leading experts report on the potentials and limitations concerning the use of computer systems in risk management. Their reports are based on many years of experience in their fields which include: risk analysis, systems engineering, geographic information systems, decision support systems, human-machine systems, and psychology. The book addresses four major issues in computer supported risk management: Conceptual aspects: the role, design, and use of computers in risk management Planning and policy analysis: transportation, equity analysis, emergency management, group decision making Operational decision making: nuclear power monitoring, emergency response, public safety warning, satellite tracking Commercial applications: GIS from IIASA, InterClair from IAEA, EPA software, cleanup decision support software survey. This book is meant for researchers, who will find the emerging issues in risk management that are motivated by the encounter of new tasks and novel technology; practitioners who will have descriptions and references of the state-of-the-art models and software; and students who will learn the basic concepts needed to develop advanced information and decision support systems in risk management.

This course has been written by experienced examiners for the AQA specification. Separate Student Books for AS and A2 provide students with the right level of support and the workbooks will act as a useful teaching and revision tool.

The Nordic Food Redistribution Project investigates food waste reduction through the redistribution of surplus food. The project goal is to increase and improve redistribution activities from donors to food banks and charity organisations in order to enhance both environmental and social sustainability in the Nordic region. The phase II report proposes best practice models concerning legislation, organisation, quality assurance and registration of food. Report recommendations are addressed at redistribution and food-serving actors, donors and authorities and focus on how to improve the quality of redistributed food, how to enhance collaboration between the various actors as well as how to prioritize and secure funding for redistribution activities. The report is part of the Nordic Prime Ministers' green growth initiative: 'The Nordic Region' leading in green growth.

'This book provides an essential resource for educators of clinical skills who want to utilise simulation based education to provide optimal learning opportunities for their students.' Andrew Bland, University of Huddersfield 'In this book, a team of experienced authors have put together a much needed text that takes an evidence-based, practical approach to skills development.' Lauren Mawson, University of Cumbria 'A really exciting new text.' Sarah Burden, Leeds Metropolitan University Practice educators and mentors are now expected to have the skills and techniques needed to implement a 'learning skills through simulation' programme into established curricula, yet using simulation to teach - while of huge importance - requires careful and time-consuming planning. This valuable resource takes away some of that burden by providing clear, ready-made activities and guidance from leading practitioners in a range of fields, which healthcare and practice educators and mentors can use to enhance their teaching of all the essential and commonly-taught clinical and management skills and knowledge. Dedicated chapters, which all follow a defined step-by-step format, provide simulation scenarios, alongside facilitator guidance, which will help develop confidence in the teaching of key skills such as: - Drug administration - Conflict management - Infection control - Breaking bad news - Catheter and bowel care These scenarios and accompanying guidance can be used as a framework for teaching, promoting a greater understanding of the skill being taught, and providing a risk-free opportunity for the student to practice their clinical and managerial skills and judgement.
