The relationship
between the observance
of financial system
standards and financial
stability is complex
owing to the multitude
of macroeconomic and
structural factors
affecting stability.

Therefore, assessments

of standards in terms of technical criteria for compliance needs to be reinforced with additional information on other factors affecting risks in order to assess financial stability. Preliminary evidence from country data on observance of Basel Core Principles (BCPs) suggests that indicators of credit risk and bank

Soundness are primarily influenced by macroeconomic and macroprudential factors and that the direct influence of compliance with Basel Core Principles on credit risk and soundness is insignificant. BCP compliance could, however, influence risk and soundness indirectly through its influence on

macro variables.
