The General Electric CF6, US military designation F103, is a family of high-bypass turbofan engines produced by GE Aviation. Based on the TF39, the first high-power high-bypass jet engine, the CF6 powers a wide variety of civilian airliners. The basic engine core also powers the LM2500, LM5000, and LM6000 marine and power generation turboshafts.

General Electric CF6 - Wikipedia

The CF6-80A and -80C2 engines are known for their high reliability, and this was evident during extended twin operations (ETOPS) testing.

The CF6 Engine | GE Aviation

CF6-80A Engine Designed for short-to-medium range commercial jets, the CF6-80A has been in service since the late 1970s. Delta TechOps has serviced these engines since 1982.

CF6-80A Engine - Delta TechOps | CF6-80A

It is an advanced development of the earlier successful General Electric CF6-50 series engine. It is divided into 3 distinct families. CF6-80A Series. The CF6-80A, which has a thrust rating of 48,000 to 50,000 lb (214 to 222 kN), powered two twinjets, the Boeing 767 and Airbus Industrie A310. The GE-powered Boeing aircraft entered airline service in 1982, the GE powered A310 in early 1983.

General Electric CF6-80

The CF6 is a two-shaft turbofan which powers medium- to long-haul Airbus and Boeing wide-body aircraft. For the CF6 MTU Aero Engines produces turbine and compressor parts. Having been manufactured for over 40 years, this engine now figures more and more importantly in MTU's repair and spare parts business.
