For senior/graduate-level first courses in Control Theory in
departments of Mechanical, Electrical, Aerospace, and
Chemical Engineering. This comprehensive treatment of the
analysis and design of continuous-time control systems
provides a gradual development of control theory—and
shows how to solve all computational problems with
MATLAB.

This edition of Modern Control Engineering is organized into ten chapters. The outline of this book is as follows: Chapter 1 presents an introduction to control systems. Chapter 2 . deals with mathematical modeling of control systems. A linearization technique for non-linear mathematical models is presented in this chapter. Chapter 3 derives mathematical models of mechanical systems and ...
