The ART of Data Mining – Practical learnings from real-world data mining applications

Data Mining Introduction, Evolution, Need of Data Mining | DWDM Video Lectures 2-introduction to data mining and KDD process Data Mining And Knowledge Management

The process of data mining can be categorized as selecting, transforming, mining, and interpreting data. The ultimate goal of doing data mining is to find knowledge from data to support user ' s decision. Therefore, data mining is strongly related with knowledge and knowledge management.

Data Mining and Knowledge Management | SpringerLink

Many organizations are employing information technology in knowledge

management to aid creation, sharing, integration, and distribution of knowledge.

The basis of data mining is a process of using tools to extract useful knowledge

from large datasets; data mining is an

essential part of knowledge management.

data mining can be useful for KM in two main manners: (i) to share common

knowledge of business intelligence (BI)

context among data miners and (ii) to use data mining as a tool to ...

Applications of data mining in knowledge management – IJERT

- Risk management: Better knowledge management also requires more advanced techniques for risk management, to identify, control, and minimize the impact of uncertain events, as shown in these papers, using fuzzy set theory and other approaches for better risk management.
- Integration of data mining and knowledge

Download Free Data Mining And Knowledge

management: As indicated earlier, the integration of these two research fields is still in the early stage.

Data Mining and Knowledge Management | SpringerLink
A systematic application of data mining techniques will enhance the knowledge management process and arm the marketers with better knowledge of their customers leading to better service to customers. To us, it is also clear that the Web technology will have a major impact on the practice of data mining and knowledge management, and that should present interesting challenges for future information systems research.

Data mining is an interdisciplinary subfield of computer science and statistics with an overall goal to extract information (with intelligent methods) from a data set and transform the information into a comprehensible structure for ...

Data mining - Wikipedia

Karahoca and Ponce (2009) describe data mining as "an important tool for the mission critical applications to minimize, filter, extract or transform large databases or datasets into summarized information and exploring hidden patterns in knowledge discovery (KD)." The knowledge discovery aspect is emphasized by Bali et al (2009), since the management of this new knowledge falls within the KM discipline.
