This informative volume on designing, detailing, and specifying metal in various applications is a much-needed reference tool for all professionals and students working with this vital material. Metal, written by designers who are also manufacturers, will acquaint designers, architects, and sculptors with the basic processes available to them in metal fabrication, so that they can begin their design process with a sense of how their work might be built. This book is not

intended to instruct in the use of machinery, but rather provides a framework of possibilities for people who design custom metalwork.

This book contains useful instruction and information for metal workers, from novice to intermediate and even advanced, on how to apply force and use good judgment, thorough planning, close observation, creativity, and

restraint to create almost any metal part. With this book, simple to complex fabrication and metal forming tasks are within the reach of adept enthusiasts.

This book presents an integrated approach to the design and manufacturing of products made of advanced composites. It is designed to teach students and practicing engineers how to streamline and improve the design process for parts and machines made out of composite materials by focusing on the behavior of composites and their constitutive relationships during the design stage. primary market for this text will be industry-sponsored courses and practicing engineers, with some potential for use in university graduate courses in the US and abroad. The book will include a CD of the authors' own analytical software, Axiomatic CLPT (Classical Laminate Plate Theory) for students and self-learners. It is part of the Oxford Series on Advanced Manufacturing (OSAM).
