Two core tenets of Lean manufacturing philosophy are eliminating defect opportunities and minimizing process variation. Consequently, most companies embracing Lean principles do some form of design for manufacturability (DfM) analysis to identify manufacturability issues either during design or in the new product introduction phase. In some cases, this is an automated feature of design software.

## Design for Manufacturing - Guidelines

Design for manufacturability is the general engineering practice of designing products in such a way that they are easy to manufacture. The concept exists in almost all engineering disciplines, but the implementation differs widely depending on the manufacturing technology. DFM describes the process of designing or engineering a product in order to facilitate the manufacturing process in order to reduce its manufacturing costs. DFM will allow potential problems to be fixed in the design phase wh
