Purple or bluish skin (cyanosis) typically indicates a problem with oxygen. Couple this color with someone who looks like he or she isn't breathing enough or appears to have shortness of breath, and you know they are suffering from a lack of oxygen (hypoxia). Pale skin is a sign of dehydration or shock.

The 3 Skin Signs for Evaluating Patients

Usually, yellow skin color is caused due to jaundice. It may also signify a severe liver condition. Hence, if the skin color of a person becomes yellow, it is important that the person seeks immediate medical attention. Also, color of his/her nails and eyes should be checked for proper diagnosis.

Skin Discoloration: Types, Causes and Symptoms - Health Hearty

Cyanosis is the bluish or purplish discoloration of the skin or mucous membranes due to the tissues near the skin surface having low oxygen saturation. Based on Lundsgaard and Van Slyke's work, it is classically described as occurring if 5.0 g/dL of deoxyhemoglobin or greater is present. This was based on an estimate of capillary saturation based on a mean of arterial versus peripheral venous ...
