'The papers contained in this volume were originally presented at the International symposium on New Directions in Urban Systems Modelling held at the University of Waterloo in July, 1983. The papers have been reviewed and rewritten since that time. The exception is the introductory paper written specially by Manfred Fischer and Peter Nijkamp as an introduction to this volume. The manuscript was prepared in the word processing unit in the department of Civil Engineering, university of Waterloo. The sustained work of Mrs. I. Steffler in preparing this manuscript is gratefully acknowledged. "r. R. K. Kumar provided excellent assistance with the editorial process. The svmposium and the preparation of this manuscript were supporteb financially by the Natural Sciences and Engineering Research Council of Canada, The Academic Development Fund and the Department of Civil Engineering, TThiversity of waterloo. Managing fiscal policy—the revenues and spending of an individual nation—is among the most challenging tasks facing governments. Wealthy countries are constrained by complex regulation and taxation policies, while developing nations often face high inflation and trade taxes. In this volume, esteemed economists Takatoshi Ito and Andrew K. Rose, along with other leading experts, examine the problems and challenges facing public finance in East Asian developing countries as well as the United States and Japan. Fiscal Policy and Management in East Asia explores the inefficient tax systems of many developing countries, the relationship between public and private sector economic behavior, and the pressing issue of future obligations that governments have undertaken to provide pensions and health care for their citizens. Featuring both overviews and analyses of the countries discussed, this book will be of value to economists and policymakers seeking to understand fiscal policy in a global context.

Through analysis of the European Union Emissions Trading Scheme (EU ETS) and the Clean Development Mechanism (CDM), this book demonstrates how to use a variety of econometric techniques to analyze the evolving and expanding carbon markets sphere, techniques that can be extrapolated to the worldwide marketplace. It features stylized facts about carbon markets from an economics perspective, as well as covering key aspects of pricing strategies, risk and portfolio management.

Students of public policy and practitioners within the farm program arena will find theis book an essential source of insight, information, and original cross-disciplinary argument."--BOOK JACKET.

Financial econometrics has developed into a very fruitful and vibrant research area in the last two decades. The availability of good data promotes research in this area, specially aided by online data and high-frequency data. These two characteristics of financial data also create challenges for researchers that are different from classical macro-econometric and micro-econometric problems. This Special Issue is dedicated to research topics that are relevant for analyzing financial data. We have gathered six articles under this theme.
