*(PDF) Clinical Pearls in Interpreting 24-Hour ECG*  
An ECG is usually carried out at the clinic, and takes just a few minutes. In some cases, the simple ECG does not provide the complete picture that we need in order to understand your symptoms. In this case, a 24-hour ECG may be recommended. Like an ordinary ECG, the 24-hour ECG (sometimes also referred to as ambulatory ECG) monitors your heart function and rhythm, except it takes results continuously for a 24 hour period.

A Holter monitor is a small, wearable device that records a continuous ECG, usually for 24 to 48 hours. Event monitor. This portable device is similar to a Holter monitor, but it records only at certain times for a few minutes at a time. You can wear it longer than a Holter monitor, typically 30 days.

Abstract. Regulatory agencies encourage sponsors to submit 24-hour ambulatory ECG data for assessing cardiac safety of new drugs, and some arrhythmias, hitherto considered rare, have been observed in some early-phase studies.
