Solid objects. The volume of any regular solid can be found by using the prismoidal rule. Three parallel planes of areas A_1 , A_3 and A_2 are considered to be at the ends and at the centre of the solid, respectively. Then: $Volume = (1/6)(A_1 + 4A_2 + A_3)$ Where: l is the length of the solid.

Mensuration - Principles of Simpson's rule - Engineersfield

Mensuration is the mathematical name for calculating the areas, volumes, length of sides, and other geometric parts of standard geometric shapes such as circles, spheres, polygons, prisms, cylinders, cones, etc., through the use of mathematical equations or formulas. Included here are the most frequently used and important mensuration formulas for the common geometric figures, both plane and solid.
