oAn  $(n, k)$  linear code  $C$  is called a cyclic

# Read Online Error Control Coding Solution Manual

code if every cyclic shift of a code vector in  $C$  is also a code vector. Codewords can be represented as polynomials of degree  $n$ .

For a cyclic code all codewords are multiple of some polynomial  $g(X)$  modulo  $X^{n+1}$  such that  $g(X)$  divides  $X^{n+1}$ .  $g(X)$  is called the generator polynomial.

Examples:

This book owes its beginnings to the pioneering work of Claude Shannon in 1948 on reliable communication over noisy transmission channels. Shannon's

central theme was that if the signaling rate of the system is less than the channel capacity, reliable communication can be achieved if one chooses proper encoding and decoding techniques.

The 4B/5B block coding discussed in Chapter 4 is a good example of this type of coding. In this coding scheme,  $k=4$  and  $n=5$ . As we saw, we have  $2^k = 16$  data words and  $2^n = 32$  code words. We saw that 16 out of 32 code words are used for message transfer and the rest are either used for other purposes or unused.

## Chapter 10 Error Detection and Correction

This thesis deals with the design of error-control coding schemes for three different problems of noisy information transmission, storage and processing.

# Read Online Error Control Coding Solution Manual

These problems have in common that they are of interest from a practical, industrial point of view and that they cannot be solved elegantly by traditional error-control coding schemes.
