Everything About Exchange Values For

In political economy and especially Marxian economics, exchange value refers to one of four major attributes of a commodity, i.e., an item or service produced for, and sold on the market. The other three aspects are use value, economic value, and price. Thus, a commodity has: a value; a use value; an exchange value, which is the proportion at which a commodity can be exchanged for other commodities; a price. These four concepts have a very long history in human thought, from Aristotle to David R

Any value exchange needs to be built on a foundation that explains and advocates this. Data needs to be used in a controlled way that has value for and balances the rights of the person who is sharing it and this needs to be transparent. What one person is fully aware of and comfortable with sharing, another individual may not be.

To keep the exchange rate fixed, the central bank holds U.S. dollars. If the value of the local currency falls, the bank sells its dollars for local currency. That reduces the supply in the marketplace, boosting its currency's value. It also increases the supply of dollars, sending its value down. If demand for its currency rises, it does the ...

What Is Part Exchange House? Typically, a person moving to a brand new home can expect to receive 85-90% of the full market value of their property, with the developer keeping the remainder. The flip side of that could be that you might not have received the full market value anyway, so the deal might be worth it for a quick and less stressful sale. You might also consider this loss a fair deal, in that the developer is not only going through the process of buying your home but will also ...

'I have lost interest ...in all that I have written prior to The Philosophy of Money . This one is really my book, the others appear to me colourless and seem as if they could have been written by anyone else.' - Georg Simmel to Heinrich Rickert (1904) In The Philosophy of Money , Simmel provides us with a remarkably wide-ranging discussion of the social, psychological and philosophical aspects of the money economy, full of brilliant insights into the forms that social relationships take. He analyzes the relationships of money to exchange, the human personality, the position of women, individual freedom and many other areas of human existence. Later he provides us with an account of the consequences of the modern money economy and the division of labour, which examines the processes of alienation and reification in work, urban life and elsewhere. Perhaps, more than any of his other sociological works, The Philosophy of Money gives us an example of his comprehensive analysis of the interrelationships between the most diverse and seemingly connected social phenomena. This revised edition of the translation by Tom Bottomore and David Frisby, includes a new Preface by Davi

Given the growing urgency to develop global responses to a changing climate, The Carbon Fix examines the social and equity dimensions of putting the world's forests—and, necessarily, the rural people who manage and depend on them—at the center of climate policy efforts such as REDD+, intended to slow global warming. The book assesses the implications of international policy approaches that focus on forests as carbon and especially, forest carbon offsets, for rights, justice, and climate governance. Contributions from leading anthropologists and geographers analyze a growing trend towards market principles and financialization of nature in environmental governance, placing it into conceptual, critical, and historical context. The book then challenges perceptions of forest carbon initiatives through in-depth, field-based case studies assessing projects, policies, and procedures at various scales, from informed consent to international carbon auditing. While providing a mixed assessment of the potential for forest carbon initiatives to balance carbon with social goals, the authors present compelling evidence for the complexities of the carbon offset enterprise, fraught with competing interests and interpretations at multiple scales, and having unanticipated and often deleterious effects on the resources and rights of the world's poorest peoples—especially indigenous and rural peoples. The Carbon Fix provides nuanced insights into political, economic, and ethical issues associated with climate change policy. Its case approach and fresh perspective are critical to environmental professionals, development planners, and project managers; and to students in upper level undergraduate and graduate courses in environmental anthropology and geography, environmental and policy studies, international development, and indigenous studies.

Karl Heinrich Marx was a German philosopher, economist, historian, sociologist, political theorist, journalist and socialist revolutionary. It is hard to think of many who have had as much influence in the creation of the modern world. In addition to his overtly philosophical early work, his later writings have many points of contact with contemporary philosophical debates, especially in the philosophy of history and the social sciences, and in moral and political philosophy. Historical materialism — Marx's theory of history — is centered around the idea that forms of society rise and fall as they further and then impede the development of human productive power. Marx's economic analysis of capitalism is based on his version of the labour theory of value, and includes the analysis of capitalist profit as the extraction of surplus value from the exploited proletariat. Marx sees the historical process as proceeding through a necessary series of modes of production, characterized by class struggle, culminating in communism.
