Description. Inert gas fire suppression systems are the safe, natural way to extinguish a fire. Because of its unique patented valve assembly, Fike ' s PROINERT agent enters the protected room within the industry required 60 seconds but at a steady flow rate — preventing destructive turbulence from occurring. This constant flow rate allows for the use of small-diameter, low pressure (and less expensive) piping from the inert gas container all the way to the nozzle.

PROINERT™ IG-55 is a clean agent fire extinguishing system using an inert gas (IG-55) consisting of 50% Nitrogen and 50% Argon and is used in total flooding systems. PROINERT™, has become widely accepted as the best performing, cost effective, and environmentally friendly inert gas fire extinguishing agent, offering extended hold times and great flexibility in design.

Pro Inert Fire Extinguishing Suppression System | Fire ...
Fike ' s PROINERT 2 system uses the inert gas, IG-55, which is made from naturally occurring environmental gases and has ZERO global warming potential. It is safe for people in normally occupied spaces and poses none of the harmful toxicity issues associated with chemically based fire suppression agents. IG-55 works by modifying air composition within the protected area to the point a fire cannot sustain itself.

The Fike Micromist® fire suppression system produces a fine mist to extinguish fires quickly, with very little residual water. In fact, the Micromist system releases 100 times less water than traditional sprinkler systems, yet effectively extinguishes the fire! That translates into less run-off, less damage and easy clean-up.

Fire Suppression | Fire Prevention Service, Inc.
Clean Agent Fire Suppression Systems (also known as HFC-227ea), uses a patented rupture disc valve design offering additional flexibility, effectiveness and speed. That translates into minimal equipment / facility damage and little or no business interruption. Clean Agent Fire Suppression Systems
