FreeCS is a free-software reimplementaion of Counter-Strike 1.5 running on the FTEQW engine. All it is, is a game-logic re-implementation in QuakeC, an architecture independent programming language. FreeCS is not a game-engine as it relies on FTEQW (released under the GPL V2). All this makes it possible to play FreeCS on virtually any platform!

It just demonstrates some ways to allocate and free dynamic memory using the C stdlib functions. Data races Only the storage referenced by ptr is modified. No other storage locations are accessed by the call. If the function releases a unit of storage that is reused by a call to allocation functions (such as calloc or malloc), the functions are synchronized in such a way that the deallocation ...
