tract is about 9 meters in length.

There are many supporting organs, such as the liver, which helps by secreting enzymes that are necessary for the digestion of food.

Gastrointestinal Tract - Definition, Anatomy, Infection ...

The gastrointestinal system has two major components, which are the alimentary canal or also called as the gastrointestinal tract and the accessory organs. It has two major functions. First, it is about breaking down of food and fluid into simple chemicals that can be absorbed into the bloodstream and transported through the body and second, is about elimination of wastes through excretion of stool.
