Software defined radio (SDR) is one of the most important topics of research, and indeed development, in the area of mobile and personal communications. SDR is viewed as an enabler of global roaming and as a unique platform for the rapid introduction of new services into existing live networks. It therefore promises mobile communication networks a major increase in flexibility and capability.

Software Defined Radio: Enabling Technologies [Book]

Before digging into the topic of Software Defined Radios, we position them in the perspective of this trend. First, flexibility in the overall wireless context is introduced. Next a (view on) taxonomy of flexible radios is given. An analysis of the software in SDRs is given. Finally, some relevant standardization initiatives are listed.
