Activities, More

Get Free Gross Motor Skills For Children With Down

Gross motor skills use the large muscles in the body and include broader movements such as walking and jumping. Typically, children develop certain motor skills at specific ages, but not every child will reach milestones at precisely the same time. A child with motor impairments has trouble moving in a controlled, coordinated, and efficient way.

Gross motor skills control our ability to execute larger movements, and they're critical for little ones learning to move around in the world. When we strengthen the pathways the brain uses to send messages to the muscles, we get greater balance, coordination, and the ability to manoeuvre our body well in its space.

What Are Gross Motor Skills
in Children? - Development

Mastering both are important for children's growth and independence. Gross motor skills are movements related to large muscles such as legs, arms, and trunk. Fine motor skills are movements involving smaller muscle groups such as those in the hand and wrist. Watch the Parents' Guide to Fine Versus Gross Motor Skills:

Help your Baby Develop Motor Skills | Track Baby Milestones

Gross motor skills are
