National Symposium on Head and Neck Cancer 2006 Eugene Myers Head and Neck Cancer Treatment Proton therapy benefits for head and neck cancer treatment Head And Neck Cancer Organ Cancers of the brain, the eye, the esophagus, and the thyroid gland, as well as those of the scalp, skin, muscles, and bones of the head and neck, are not usually classified as head and neck cancers. Sometimes, cancerous squamous cells can be found in the lymph nodes of the upper neck when there is no evidence of cancer in other parts of the head and neck (1).

Head and Neck Cancers - National Cancer Institute

Head and neck cancers include cancers of the mouth and throat, as well as rarer cancers of the nasal cavity (inside the nose), sinuses, salivary glands and middle ear. Close Menu

Head and neck cancer - throat, mouth, salivary gland ...

Cancer cells in the head or neck can sometimes travel to the lungs and grow there. When cancer cells do this, it's called metastasis. To doctors, the cancer cells in the new place look just like the ones from the head or neck where it started. Cancer is always named for the place where it starts.

If You Have Head or Neck Cancer

Organ at Risk Segmentation for Head and Neck Cancer using Stratified Learning and Neural Architecture Search. OAR segmentation is a critical step in radiotherapy of head and neck (H&N) cancer, where inconsistencies across radiation oncologists and prohibitive labor costs motivate automated approaches. However, leading methods using standard fully convolutional network workflows that are challenged when the number of OARs becomes large, e.g. > 40.

Organ at Risk Segmentation for Head and Neck Cancer using ...

References for this review were identified by searches of Medline and PubMed using each organ at risk (eg, "parotid gland", "submandibular gland", etc) or complication (eg, "xerostomia", "dysphagia", etc), as well as "radiotherapy" and "head and neck cancer" as search terms.
