Edition - amazon.com

These are Internet routers that decide where to send your packets. Several routers are shown in Diagram 3, but only a few. Diagram 3 is meant to show a simple network structure. The Internet is much more complex. Internet Infrastructure The Internet backbone is made up of many large networks which interconnect with each other.

devices to integrate with the Internet. This network of networks crisscrosses the globe and even extends into space. But what makes it work? To understand the Internet, it helps to look at it as a system with two main components. The first of those components is hardware. That includes everything from the cables that carry terabits of information every second to the computer sitting in front of you.

That ' s a high level overview of how the internet works, at least. There are lots of little topics that are important to the internet we all use, and which you can read about in more detail. For example, every device on a network has a unique, numerical IP address on that network. Data is sent to these addresses.

How the Internet works: A simple introduction

The Internet Protocol (IP) is the protocol which allows messages, known as packets, to find their way across more complex networks like the Internet. Unlike Ethernet, which works by broadcast-ing messages to everyone including the recipient, IP allows messages to be routed to the correct destination.

Internet Works (8th Edition ...

The Internet (or internet) is the global system of interconnected computer networks that uses the Internet protocol suite (TCP/IP) to communicate between networks and devices. It is a network of networks that consists of private, public, academic, business, and government networks of local to global scope, linked by a broad array of electronic, wireless, and optical networking technologies.
