The current standard specifies that at least
one FSA should be conducted—FSA 3, prior to
startup, then periodically per clause
5.2.6.1.10 (FSA 4). However, if you wait
until FSA 3 to carry out your first FSA, you
run the risk of delaying the startup of your
system if discrepancies and/or non-
compliances are discovered.

IEC 61508 - Wikipedia

IEC standard 61511 is a technical standard which sets out practices in the engineering of systems that ensure the safety of an industrial process through the use of instrumentation. Such systems are referred to as Safety Instrumented Systems. The title of the standard is "Functional safety - Safety

Clause 17 of IEC 61511 sets the guidelines to follow. We must ensure that the safety integrity required by the SIS is maintained after the modifications made. Functional Safety Assessment (FSA) : An FSA must be done periodically during this phase to ensure that maintenance and operation is carried out in accordance with the assumptions made during the design.

IEC TR 61511-4:2020 is a formal rationale provided by IEC technical committee 65 explaining the changes. The main driver for 61511 Ed. 2 revision was to reinforce the necessity of Functional Safety Management based on a Safety Life Cycle approach. Parallel, a number of potential misinterpretations from Ed. 1 were clarified.
