the ten most important papers ever published in that field. These range from observational and experimental studies from the 18th century, which laid the groundwork for our current understanding of the kidney, through to recent randomized controlled clinical trials. The papers also reflect the emergence of

nephrology as a speciality in the last fifty years, stimulated particularly by the introduction of renal biopsy and the development of dialysis and transplantation as effective forms of renal replacement therapy. For each paper, there is a succinct commentary which highlights the importance of the work in its historical

research laboratories. Although these experiments have been conducted and optimized over 20 years of teaching the New England Biolabs Molecular Biology Summer Workshops, they are real research projects, not "canned" experiments. Based on extensive teaching experience using these protocols, the authors have found
