This book discusses the expertise, skills, and techniques needed for the development of new materials and technologies. It focuses on finite element and finite volume methods that are used for engineering simulations, and present many state-of-the-art applications and advances to highlight these methods ' importance. For example, modern joining technologies can be used to fabricate new compound or composite materials, even those formed from dissimilar component materials. These composite materials are often exposed

to harsh environments, must deliver specific characteristics, and are primarily used in automotive and marine technologies, i.e., ships, amphibious vehicles, docks, offshore structures, and even robots. To achieve the desired material performance, computer-based engineering tools are widely used for simulation, data evaluation, and design processes.

This book presents various state-of-the-art applications for the development of new materials and technologies, discussing computer-based engineering tools that are widely used in simulations, evaluation of data and design processes. For example, modern joining technologies can be used to fabricate new compound or composite materials, even those composed of dissimilar materials. Such materials are often exposed to harsh environments and must possess specific properties. The authors' goal is to explore how an alternative, politically viable public discourse on education can be constructed. They examine the kinds of conditions, concerns, and subjectivities that must be attended to in order to develop an effective and resonant new language that can re-focus the purposes of education in this society. The authors' agree that educational discourse must be transformed into a visible, morally and politically vital, public commentary and debate - one that can begin to address the social, cultural, and spiritual crises that now confront humanity.

Hailed by Agatha Christie as “ the king of the art of misdirection, ” John Dickson Carr draws readers into a thrilling tale of a family ’ s hunt for an inheritance hidden in a haunted New Orleans mansion Before he became a commodore in the Confederate Navy, Serena Hobart ’ s grandfather was a treasure hunter who combed the bottom of the sea in search of Spanish gold. In 1927, after her father dies, Serena wants nothing more than to be rid of Delys Hall, the commodore ’ s rambling old New Orleans mansion, which has been nicknamed “ Deadly Hall ” because some pretty awful things have occurred there, including murder. When her relatives hear rumors that there may be gold hidden in the old house, they will stop at nothing to keep it in the family. Serena ’ s childhood friend Jeff Caldwell senses that Serena is in danger and wants to protect her. But there are many dark corners in Deadly Hall, maybe even ghosts, and certainly relatives who can dream up a thousand ways to kill.

Although the subject of trust has received increasing attention in the fields of organisation studies and, to some extent, entrepreneurship, the field has, to date, largely been characterised by theoretical work which, though useful, is still often difficult - if not impossible to operationalise. This book adopts an alternative view to the scientific,

modernist approach to organisational study, moving beyond a simple study of trust in organisations to tackle some of the more fundamental philosophical issues that surround management studies and entrepreneurship.

A leading economic forecaster, exploring the reasons for the United States dollar's decline and its precarious relationship to other currencies around the world, provides strategies for retirees, savers and investors who want to keep their money safe no matter what lies ahead.

This text's contemporary approach focuses on the concepts of linear control systems, rather than computational mechanics. Straightforward coverage includes an integrated treatment of both classical and modern control system methods. The text emphasizes design with discussions of problem formulation, design criteria, physical constraints, several design methods, and implementation of compensators. Discussions of topics not found in other texts—such as pole placement, model matching and robust tracking—add to the text's cutting-edge presentation. Students will appreciate the applications and discussions of practical aspects, including the leading problem in developing block diagrams, noise, disturbances, and plant perturbations. State feedback and state estimators are designed using state variable equations and transfer functions, offering a comparison of the two approaches. The incorporation of MATLAB throughout the text helps students to avoid time-consuming computation and concentrate on control system design and analysis.

If you can build websites with CSS and JavaScript, this book takes you to the next level—creating dynamic, database-driven websites with PHP and MySQL. Learn how to build a database, manage your content, and interact with users. With step-by-step tutorials, this completely revised edition gets you started with expanded coverage of the basics and takes you deeper into the world of server-side programming. The important stuff you need to know: Get up to speed quickly. Learn how to install PHP and MySQL, and get them running on both your computer and a remote server. Gain new techniques. Take advantage of the all-new chapter on integrating PHP with HTML web pages. Manage your content. Use the file system to access user data, including images and other binary files. Make it dynamic. Create pages that change with each new viewing. Build a good database. Use MySQL to store user information and other data. Keep your site working. Master the tools for fixing things that go wrong. Control operations. Create an administrative interface to oversee your site.
