Molecule Polarity Phet

Lab Answer Key

The molecule is polar because it does not have the same charge.

H=Positive charge.

F=Negative charge.

H<sub>2</sub>O (water) The molecule is polar, because it doesn't have

*Page 22/31*

File Type PDF

Molecule

the same charge. H1 and H2=Have a positive and an electrostatic potential charge. O=Negative charge. CH<sub>2</sub>F<sub>2</sub> Is polar because, it have some charges that have atoms that are positive and negative.

phet.docx - Molecule

Polarity In this activity

you will ...

A molecule is polar if

File Type PDF

Molecule

one part of it has a partial positive charge, and the other part has a partial negative charge.

When in a bond, atoms can either share electrons (covalent) or give them up . The atom that holds the electrons closer will thus be more negatively charged than the other atom Three Atoms tab 4. Describe any new ways you can

File Type PDF
