“Fifty years after the birth of corporate computing, IT today is still characterized by 50-70% project failure rates. Which is pretty scary when you come to think of it: either a goblin has cast a spell on a whole profession – or that profession is doing something fundamentally wrong”. IT Success! challenges the widespread assumption that an IT department is like a building contractor whose project managers, architects and engineers (all construction industry terms...) are supposed to deliver systems on schedule,

within budget and to spec. Michael Gentle explains why this is not possible, and turns conventional wisdom on its head by showing that: you cannot define an IT project in terms of contractual budgets and schedules anything can change during the life of a project what is eventually delivered can never be what is actually needed He proposes a new model for IT in which the traditional client/vendor relationship, with its contractual commitments, is replaced by a shared risk/reward partnership geared towards workable results over time. Using real-world examples and a case study, the author walks you through the end-to-end processes of an IT department, covering subjects like demand management, investment planning, agile development and managing production applications.

Leading scholars in the field of social networks from diverse disciplines present the first systematic and comprehensive collection of current theories and empirical research on the informal connections that individuals have for support, help, and information from other people. Expanding on concepts originally formulated by Pierre Bourdieu and James Coleman, this seminal work will find an essential place with educators and students in the fields of social networks, rational choice theory, institutions, and the socioeconomics of poverty, labor markets, social psychology, and race. The volume is divided into three parts. The first segment clarifies social capital as a concept and explores its theoretical and operational bases. Additional segments provide brief accounts that place the development of social capital in the context of the family of capital theorists, and identify some critical but controversial perspectives and statements regarding social capital in the literature. The editors then make the argument for the network perspective, why and how such a perspective can clarify controversies and advance our understanding of a whole range of instrumental and expressive outcomes. Social Capital further provides a forum for ongoing research programs initiated by social scientists working at the crossroads of formal theory and new methods. These scholars and programs share certain understandings and approaches in their analyses of social capital. They argue that social networks are the foundation of social capital. Social networks simultaneously capture individuals and social structure, thus serving as a vital conceptual link between actions and structural constraints, between micro- and macro-level analyses, and between relational and collective dynamic processes. They are further cognizant of the dual significance of the "structural" features of the social networks and the "resources" embedded in the networks as defining elements of social c

This introduction to communication research methods takes the student from the conceptual beginnings of a research project through the design and analysis. Emphasizing the correct questions to ask and how to approach the answers, authors Gary Petty, Cheryl Campanella Bracken, and Elizabeth Babin approach social science methods as a language to be learned, requiring multiple sessions and reinforcement through practice. They explain the basics of conducting communication research, facilitating students' understanding of the operation and roles of research so that they can better critique and consume the materials in their classes and in the media. The book takes an applied methods approach, introducing students to the conceptual elements of communication science and then presenting these elements in a single study throughout the text, articulating the similarities and differences of individual methods along the way. The study is presented as a communication campaign, involving multiple methodologies. The approach highlights how one method can build upon another and emphasizes the fact that, given the nature of methodology, no single study can give complete answers to our research questions. Unique features of the text: It introduces students to research methods through a conceptual approach, and the authors demonstrate that the statistics are a tool of the concepts. It employs an accessible approach and casual voice to personalize the experience for the readers, leading them through the various stages and steps. The presentation of a communication campaign demonstrates each method discussed in the text. This campaign includes goals and objectives that will accompany the chapters, demonstrates each individual methodology, and includes research questions related to the communication campaign. The tools gained herein will enable students to review, use, understand, and critique research, including the various aspects of appropriateness, sophistication and utility of research they encounter.
