Participatory research is well-established as an approach involving people with a direct interest in, or experience of, the issue being studied in carrying out research. However, it raises unique and challenging ethical issues. Traditional concerns with respect for the rights to confidentiality, consent, privacy and protection of 'research informants' do not translate easily into participatory research. Boundaries between researchers and those researched are often blurred; research trajectories may be emergent and unpredictable; and major ethical issues revolve around partnership, power, equality and respect for diverse knowledges. The book introduces the key ethical issues in participatory research, drawing on ethical theory and relevant literature before presenting seven substantive chapters, each on a different theme, such as power, ownership, confidentiality and boundaries. The chapters feature an introductory overview of the topic with reference to the literature, followed by four real-life case examples written by participatory researchers and short commentaries on each case. Drawn from around the world (from Denmark to Tanzania), the cases illustrate a range of ethical issues, outlining how they were handled and the reflections and feelings of the contributors.? Focusing on developing ethical awareness, confidence and courage to act in ethically challenging situations in everyday research practice, this book is an invaluable resource for all participatory researchers.

Questions in Qualitative Social Justice Research in Multicultural Contexts take readers on an accessible and inspiring journey to critically self-reflect on current or future research practices to encourage and facilitate greater equity, inclusion, and social justice in qualitative research. In a diverse world, "doing" qualitative research needs unpacking and developing awareness of

interconnected perspectives and challenges. However, as researchers, there is not always a chance to fully prepare or self-reflect on the processes and experiences. This book raises awareness of key multidimensional aspects of social justice, such as power, privilege, trust, insider-outsiderness, ethics, arts-based, co-produced, and decolonial research. The authors connect theory and conceptual constructs with practical in-field realities, guiding researchers through the dynamic, evolving steps to give voice to and promote social justice practices in research. The book includes the following features to guide thinking for researchers and students: Bolded key terms and questions for self-reflection. Boxed case studies from both top international scholars and emerging scholars. Glossary of key terms. This foundational book can be used as a jumping-off point to engage and critically self-reflect about research moving us towards decolonizing research practice, creating more inclusive, equitable, and socially just research. It will be suitable for upper-level and postgraduate students and all researchers interested in qualitative methods in education and the social and behavioral sciences.
