Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Edited by Rosenberg Occupational and Environmental Neurology fills a gap in the clinical literature available to the neurologist and occupational medicine physician. This volume meets a critical need for clinical guidelines for determination of whether neurological dysfunction in a worker is caused by a naturally occurring condition or is secondary to local exogenous working conditions.

Workers and their families, employers, and society as a whole benefit when providers deliver the best quality of care to injured workers and when they know how to provide effective services for both prevention and fitness for duty and understand why, instead of just following regulations. Designed for professionals who deliver, manage, and hold oversight responsibility for occupational health in an organization or in the community, Occupational Health Services guides the busy practitioner and clinic manager in setting up, running, and improving healthcare services for the prevention, diagnosis, treatment, and occupational management of work-related health issues. The text covers: an overview of occupational health care in the US and Canada: how it is organized, who pays for what, how it is regulated, and how workers ' compensation works how occupational health services are managed in practice, whether within a company, as a global network, in a hospital or medical group practice, as a free-standing clinic, or following other models management of core services, including recordkeeping, marketing, service delivery options, staff recruitment and evaluation, and program evaluation depth and detail on specific services, including clinical service delivery for injured workers, periodic health surveillance, impairment assessment, fitness for duty, alcohol and drug testing, employee assistance, mental health, health promotion, emergency management, global health management, and medico-legal services. This highly focused and relevant combined handbook and textbook is aimed at improving the provision of care and health protection for workers and will be of use to both managers and health practitioners from a range of backgrounds, including but not limited to medicine, nursing, health services administration, and physical therapy.
