Bought a 2nd hand Peugeot 207 1.4 Sport with 30,500 on the clock - in first 3 months had issue with brakes squeaking, had fault with fuel pollution diagnostics and had an oil leak - thankfully took a 3 month warranty with garage. No problems since around 5 months in - but would be a bit wary about buying another Peugeot.

Everyone wants to go green these days, but for businesses that's easier said than done. How do you measure a company's carbon footprint? Are dryers or hand towels more eco-friendly? Recycled paper or FSC-certified? And what's the greenest company car? The Green Guide for Business answers all these questions and hundreds more, enabling businesses and organisations of all sizes to make eco-savvy decisions. Accessible but authoritative, the book also features scores of case studies to help readers learn from other people's successes and mistakes. From keeping ahead of environment legislation to green marketing, The Green Guide for Business is indispensable for every company with an environmental conscience.

"This book analyzes how the governance of innovation can foster sustainability. The quest for innovation is consistently at the top of the agenda for policy makers around the globe, on the supra-national level, as well as for the nation states and all the way down to debates in local governance and policy boards. At the same time, sustainability is a core feature of this dialogue in creating, diffusing and using technologies and products so that human needs can be met, while unnecessary natural resources are not being used or destroyed.Based on these premises and given the complexity of sustainable innovation, there is an ever growing recognition among policy makers, industries and analysts that the development and diffusion of technological innovations need governing in order to contribute to societal goals such as climate change mitigation and resource efficiency. Such governance does not necessarily mean orchestration, imposing regulation or other policy measures in a top-down manner. Governance can be facilitated through a number of means and by various actors and different levels. This book presents a view of governance that involves almost all types of actors related to any specific sector or field. "--

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption—the amount of fuel consumed in a given driving distance—because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
