The Ultimate Guide to Night Photography

Night sky photography requires comparatively little equipment compared to other photographic media. The essential tools are: A camera (either SLR camera or DSLR camera)which is the digital camera version of an SLR). One or more lenses that can handle low light and long exposures (ideally one of these will be a wide angle lens).

How to Take Night Sky Photos: Guide to Night Sky Photography

I use and recommend the Nikkor 14-24mm f/2.8 lens for night sky and landscape photography. It is the best wide angle lens currently made for landscape and night photography. Camera Timer / Intervalometer: Most cameras will take up to a 30 second exposure without a timer. If you would like to capture long exposure images of the night sky, longer than 30 seconds, you'll need a timer.

Milky Way & Star Photography - Landscape, Night Sky ...

Shooting time-lapse sequences is similar to shooting a single image in that exposure is based on the shooting conditions. For time-lapse photography of the stars in the night sky, use an aperture of about f/5.6 if the moon is full, f/2.8 if the moon is not full. In manual exposure mode, shoot a test shot at 10 seconds.

Photographing the Night Sky | Nikon

Set your ISO to a high number. You can start around 800, and work your way up, depending on the light conditions. The higher you go, the more noise you'll have in your final image. With a great camera, you can still shoot some gorgeous, clear night photos at a high ISO. Utilize a high slow-shutter speed.
