are all examples of  
plane geometry.  
These shapes exist in  
two dimensions (2D).

When you draw a  
rectangle, for  
example, it has two  
measurements: length  
and width. These two  
measurements  
represent the two-  
dimensional plane  
that this shape exists  
in.

Geometry can be  
divided into: Plane

Geometry is about flat  
shapes like lines,  
circles and triangles ...  
shapes that can be  
drawn on a piece of  
paper. Solid Geometry  
is about three  
dimensional objects  
like cubes, prisms,  
cylinders and  
spheres.
