A beautiful and compulsively readable literary debut that introduces Owen Burr—an Olympian whose dreams of greatness are dashed and then transformed by an epic journey—and his father, Professor Joseph Burr, who must travel the world to find his son. After his athletic career ends abruptly, Owen flees the country to become an artist. He lands in Berlin where he meets a group of art monsters living in the Teutonic equivalent of Warhol's Factory. After his son's abrupt disappearance, Burr dusts off his more speculative ideas in a last-ditch effort to command both Owen's and the world's attention. A Brave Man Seven Storeys Tall offers a persuasive vision of faith, ambition, art, family, and the myths we write for ourselves.

Modern computing tools like Maple (symbolic computation) and Matlab (a numeric computation and visualization program) make it possible to easily solve realistic nontrivial problems in scientific computing. In education, traditionally, complicated problems were avoided, since the amount of work for obtaining the solutions was not feasible for the students. This situation has changed now, and the students can be taught real-life problems that they can actually solve using the new powerful software. The reader will improve his knowledge through learning by examples and he will learn how both systems, MATLAB and MAPLE, may be used to solve problems interactively in an elegant way. Readers will learn to solve similar problems by understanding and applying the techniques presented in the book. All programs used in the book are available to the reader in electronic form.
