This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

As recently as thirty years ago, Americans lived in a financial world that today seems distant. Investment and borrowing choices were meager: virtually all transactions were conducted in cash or by check. The financial services industry was heavily regulated, as an outgrowth of the Depression, while an elaborate safety net was constructed to prevent a repeat of that dismal episode in American history. Today, consumers and businesses have a dizzying array of choices about where to invest and borrow. Plastic credit cards and electronic transfers increasingly are replacing cash and checks. Much regulation has been dismantled, although the industry remains fragmented by rules that continue to separate banks from other enterprises. Meanwhile, finance has gone global and increasingly high-tech. This book, originally prepared as a report to Congress by the Treasury Department, outlines a framework for setting policy toward the financial services industry in the coming decades. The authors, who worked closely with senior Treasury officials in developing their recommendations, identify three core principles that lie at the heart of that framework: an enhanced role for competition; a shift in emphasis from preventing failures of financial institutions at all cost toward containing the damage of any failures that inevitably occur in a competitive market; and a greater reliance on more targeted interventions to achieve policy goals rather than broad measures, such as flat prohibitions on certain activities.

David Spiceland, Wayne Thomas and Don Herrmann have developed a unique text based on over 50 collective years of experience in the classroom. They've brought together best practices like highlighting Common Mistakes, offering frequent Let's Review exercises, integrating the course with a running Continuing Problem, demonstrating the relevance of the course to non-majors with a Career Corner, and communicating it all in a student-friendly Conversational Writing Style. The new 2nd edition of Financial Accounting, Spiceland, Thomas, Herrmann, has been developed with feedback from over 330 reviewers and focus group participants from across the country. The following list of changes and improvements is a testament to the many hours that reviewers spent analyzing the 1st edition, helping make Financial Accounting, 2nd edition, the best book of its kind.
