This comprehensive and up-to-date text, now in its Third Edition, describes how the latest techniques in production planning and control are applied to contemporary industrial setups so as to meet the ever-increasing demands in industrial organizations for better quality of services, for faster delivery of products and for adapting to the rapid changes taking place in

Online Library Production Planning And Control With Sap Basic Principles

the industrial scenario. With the demands in the industrial arena increasingly tending to be lumpy, the most effective strategy for planning and controlling production processes cannot be a static, preconceived one.

Instead, it is one that is flexible and is capable of adapting to the erratic changes in demand patterns. Evolving such a strategy requires more of practical skill than mere theoretical knowledge of the subject. This book explores the demands of the present-day industrial environment and the techniques for addressing these demands through a number of case studies drawn from Indian industries.

Online Library Production Planning And Control With Sap Basic Principles

The efficacy of various planning strategies, the methods for implementing them, and their suitability for different industries have been clearly explained in relation to these cases. While the essentials of theory have been covered in a simple and straightforward style, the stress is on developing the practical skills required to tackle the unpredictable problems and the unforeseen demands that pose a formidable challenge to modern industries. The book places emphasis as much on the principles of heuristic techniques as on the systematic approach to production planning. This book would serve as

A useful textbook to postgraduate students of management as well as undergraduate students of industrial engineering. It will be equally useful to the teaching community and the practicing professionals. NEW TO THE THIRD EDITION • Includes a new chapter on 'Leagile Manufacturing: A Contemporary Manufacturing Syndrome' (Chapter 11) • Provides several references to explore more in the field KEY FEATURES • Gives solved problems that serve as numerical illustrations of the theoretical concepts. • The Case Studies given focus on the Indian scenario; these will be of great practical value to students and professionals

Over the last fifty-plus years, the increased complexity and speed of integrated circuits have radically changed our world. Today, semiconductor manufacturing is perhaps the most important segment of the global manufacturing sector. As the semiconductor industry has become more competitive, improving planning and control has become a key factor for business success. This book is devoted to production planning and control

problems in semiconductor wafer fabrication facilities. It is the first book that takes a comprehensive look at the role of modeling, analysis, and related information systems for such manufacturing systems. The book provides an operations research- and computer science-based introduction into this important field of semiconductor manufacturing-related research.

The goal of this textbook is to introduce concepts of production planning and control. Starting with the basis of planning processes, relevant aspects of the information base, planning tasks and methods are addressed. The focus is set on concepts used in practice, like: MRP II, Kanban, ConWiP, Input-Output-Control, Workload Control, etc. Furthermore, developing concepts directed towards decentralization (Production Authorization Card system) and flexibility orientation (Opportunistic Planning and Scheduling) are explained.

This new text offers an up-to-date look at production systems, the dynamic backbone of modern manufacturing and service. Based upon their experience as teachers, engineers in industry, and consultants, the authors provide a problem-driven approach to planning, controlling, and integrating production in a changing global environment. Topics covered include the evolution of production systems, problem solving, forecasting, aggregate planning, inventory, materials requirements, planning, scheduling, project management, and integrated production planning and control.
