Children represent a special challenge for emergency care providers, because they have unique medical needs in comparison to adults. For decades, policy makers and providers have recognized the special needs of children, but the system has been slow to develop an adequate response to their needs. This is in part due to inadequacies within the broader emergency care system. *Emergency Care for Children* examines the challenges associated with the provision of emergency services to children and families and evaluates progress since the publication of the Institute of Medicine report *Emergency Medical Services for Children* (1993), the first comprehensive look at pediatric emergency care in the United States. This new book offers an analysis of:

- The role of pediatric emergency services as an

integrated component of the overall health system. • System-wide pediatric emergency care planning, preparedness, coordination, and funding. • Pediatric training in professional education. • Research in pediatric emergency care. Emergency Care for Children is one of three books in the Future of Emergency Care series. This book will be of particular interest to emergency health care providers, professional organizations, and policy makers looking to address the pediatric deficiencies within their emergency care systems.

Fleisher and Ludwig's 5-Minute Pediatric Emergency Medicine Consult offers comprehensive, practical information on over 500 pediatric emergency issues in a fast-access two-page "5 Minute" outline format for easy emergency department use. Coverage includes clinical presentation, pre-hospital, diagnosis, treatment, disposition, ICD-9 coding, and pitfalls. Treatment recommendations are congruent with those of recognized, authoritative sources including the American Academy of Pediatrics and the American College of Emergency Medicine. The book includes pediatric medical, surgical, and environmental/poisoning emergencies, and contains reference
