React - Up & Running - Building Web Applications Download
Set up a React app with a Node.js server proxy. Create React App is a great tool for getting a React application up and running. It's a little less clear when you're building or prototyping an application that requires a server side component, like generating access tokens for Twilio Video or Chat, though. I've found it easiest to work with a server within the same project so that you can start everything up with one command.

Set up a React app with a Node.js server proxy - Twilio
Today, we will build and run a React Application with Webpack that also includes React, Babel, Webpack devtool and devServer configuration, then we can run the app with live-server for public folder: React Application with Webpack Prepare folders and files.
