Schizotypy and Schizophrenia: The View from Experimental ...

Schizotypy is a set of traits analogous with the symptoms of schizophrenia. This article explores their putative role in the creative process, arguing that any relationship with creativity is complex and potentially bidirectional, where positive symptoms (e.g., pseudo-hallucinations) may be associated with factors that facilitate creativity (e.g. cognitive disinhibition) while negative schizotypy (e.g. anhedonia) inhibits creativity.

Negative schizotypy was associated with interview-rated negative symptoms, and schizotypal and schizoid traits, and elevated rates of schizophrenia-spectrum personality disorders. Disorganized schizotypy was associated with disorganized symptoms and attentional deficits. All three subscales were associated with impaired functioning.

Positive, Negative, and Disorganized Schizotypy Predict ...

Overall, schizotypy and schizophrenia seem to have a substantial overlap in terms of etiological factors at the genetic, biological, and psychosocial levels, which support the notion of not only phenomenological but also etiological continuity and the claim that schizotypy is a useful framework to investigate both normal individual differences and the etiology of schizophrenia spectrum disorders.
