The U.S. Government and many large corporations are conducting feasibility studies on the Stirling Cycle principle. At this time, the Model Stirling Cycle engines produced by Solar Engines are the only commercially manufactured Stirling Cycle Engines available in the world. A more complete History of the Stirling Cycle Engine is available in Andy Ross's book "Stirling Cycle Engines".

Stirling Engine with Ross yoke. Speed 10 fps. Andy Ross, a prominent Stirling engine experimenter, developed a Stirling engine using the linkage illustrated here. This engine is identical in operation to the two cylinder Stirling. In this illustration, the left cylinder is the hot cylinder. The linkage allows the engine to be more compact, and reduces side loads on the pistons and connecting rods (because their

The two-cylinder Stirling with Ross yoke is a two-cylinder
stirling engine (positioned at 0° , not 90°) connected using a
special yoke. The engine configuration/yoke setup was
invented by Andy Ross. The Franchot engine is a double
acting engine invented by Charles-Louis-Félix Franchot in the
nineteenth century. In a double acting engine, the pressure of
the working fluid acts on both sides of the piston.
