How to Desolder Electronic Components From Circuit Boards ...

The idea is simple: to join electrical parts together to form an electrical connection, using a molten mixture of lead and tin (solder) with a soldering iron. A large range of soldering irons is available - which one is suitable for you depends on your budget and how serious your interest in electronics is.

The Basic Soldering & Desoldering Guide

A very basic mains electric soldering iron can cost from under £ 5 (US\$8), but expect a reasonable model to be approximately £ 10 to £ 12 (US\$ 16 to 20) - though it's possible to spend into three figures on a soldering iron "station" if you're really serious about the subject! The very cheapest irons tend to be less than

To desolder a component with pins close to each other, such as a capacitor, LED, or switch, simply apply solder to both pins, and move the soldering iron from one pin to the other continuously, to ensure that the solder on both pins is melted. At this point, the component should simply drop off the board.
