It is widely accepted that most  
psychiatric disorders are associated  
with cognitive impairment and that  
neuropsychological approaches can  
help unravel the mechanisms  
underlying brain function and help us  
develop a better understanding of  
these disorders.

## *The Neuropsychology of Mental Disorders*

The neuroscience of personality is becoming increasingly sophisticated, both in terms of theoretical models and methodological approaches, and research in Britain is at the forefront of these developments. The combination of theory and method is especially important in understanding mental disorders (e.g. anxiety and schizophrenia).
