The current indications for thoracoscopic spine surgery include tissue biopsies, thoracic paravertebral abscess drainage and debridement, thoracic disc herniation excisions, anterior spinal release and/or fusion for spinal deformity, stabilization and fusion of thoracic and thoracolumbar fractures, corpectomy for vertebral tumors, and the placement of anterior spinal instrumentation with fusion.

Thoracoscopic Spine Surgery: Current Indications and ...

Thoracic Herniated Disc Surgery. Thoracic Herniated Disc Video. Thoracic herniated disc surgery is indicated in only rare instances when a herniated disc leads to myelopathy (spinal cord dysfunction), progressive neurologic deficits, or intolerable pain. Typically, these symptoms occur following an acute traumatic herniated disc with myelopathy. The thoracic surgery to address these symptoms, called a decompression, is designed to take the pressure off the spinal cord or nerve root.

Most commonly this technique is offered to teenagers, who have a scoliosis curve of around 40 degrees or more in the thoracic spine. The surgery is performed under a special anaesthetic that permits one of the lungs to be deflated to expose the spine inside the chest cavity. While asleep on your side, special keyhole telescopic instruments allow the surgeon to enter the chest cavity through 3 or 4 portal incisions made in between the ribs, each 2cm long.

Thoracoscopic (minimally invasive) spinal surgery | Briz ...

What is Thoracoscopic Spine Surgery? The thoracoscopic approach allows the surgeon access to the anterior thoracic spine without the large incision or chest wall musculature dissection used in the open approach. Multiple small skin incisions are made along the side of the chest wall to allow insertion of a fiber-optic camera and surgical instruments.

Endoscopic & Thoracoscopic Spinal Surgery Large T7-8 disc herniation causing spinal cord compression. This lesion is well treated with an endoscopic procedure that avoids a large thoracotomy procedure Endoscopic surgery has special applications for treatment of spinal problems particularly in the thoracic spinal column.

Endoscopic & Thoracoscopic Spinal Surgery - The Spine ...

Thoracoscopy combines the science of endoscopy (video-assisted surgery) with thoracotomy (access to chest, or thoracic spine). Utilizing thoracoscopy, highly skilled spinal surgeons have determined lateral (from the side) entry through the chest wall provides sufficient access to the thoracic spine to enable thoracic scoliotic curve correction.

Thoracoscopy in the Treatment of Scoliosis

Thoracic spine surgery is a viable option for several spinal conditions that cause mid-back pain. The thoracic spine refers to the upper and middle-back portion of the spine. It joins the cervical spine and extends down about five inches past the bottom of the shoulder blades, where it connects with the lumbar spine.

Thoracic Spine Surgery | Thoracic Spine Surgeons

Mack performed the first thoracoscopic spine surgery in 1992. Placing spinal instrumentation (screws, rods, or plates) into the vertebrae through the scope is being investigated. Currently, there are several centers across the United States that have experience treating spinal disorders through the thoracoscope.

Thoracoscopic Spine Surgery - Sonoran Spine

Lumbar decompression surgery is a type of surgery used to treat compressed nerves in the lower (lumbar) spine. It's only recommended when non-surgical treatments haven't helped. The surgery aims to improve symptoms such as persistent pain and numbness in the legs caused by pressure on the nerves in the spine.

Lumbar decompression surgery - NHS

Nerve roots and the spinal cord can be decompressed through the resection of thoracic herniated nucleus pulposus. Pathologic lesions: A thoracoscopic approach may be used for the treatment of infection or tumor through biopsy, debridement, drainage of an abscess, resection of a tumor, or corpectomy.
