FLUENT computes the heat flux along a wall based on currently selected models to account for the diffusive and radiative energy

Read Free Udf Condensation

fluxes (if any). You must only use a `DEFINE_HEAT_FLUX` UDF when you want to employ some other heat transfer mechanism that is not currently being modeled. The total heat flux at the wall will be the sum of the currently computed heat flux (based on the activated models) and the heat flux defined by the UDF.
