Rainfall Variability Over Tekeze River Basin

The spatial variability of rainfall was estimated using a coefficient of variation (CV) over the IGB . CV is calculated by the standard deviation divided by the mean annual of rainfall over the study period. It represents a least in the region of high rainfall, whereas the largest in the region of scanty rainfall.

Rainfall variability over the Indus, Ganga, and ...

This study examined the extent of seasonal rainfall variability, drought occurrence, and the efficacy of interpolation techniques in eastern Kenya. Analyses of rainfall variability utilized rainfall anomaly index, coefficients of variance, and probability analyses. Spline, Kriging, and inverse distance weighting interpolation techniques were assessed

Rainfall Variability, Drought Characterization, and ...

The rainfall variability and trends over North Shewa investigated using gauge as well as gridded rainfall data from 1985 to 2018. The variability of rainfall in both annual and seasonal scales were evaluated using coefficient of variation (CV), standardized rainfall anomaly, precipitation concentration index (PCI), and standardized precipitation index.

Understanding rainfall spatial variability
in southeast ...

Our understanding of what controls
rainfall variability and change is
worryingly poor. Research in the group
aims to provide a more solid
understanding of climate processes in key
rainfall regions such as southern Africa,
central Africa/Congo Basin, East Africa
and the Sahel. We are also strongly
motivated by analysing how the climate
system is represented in climate models
because these are the prime tools for
prediction.
