In the group of patients in whom a cyst was suspected, a much greater proportion opted for surgical treatment than in sulcus; this may be due to the fact that cysts are sometimes associated with an acquired etiology linked to vocal abuse<sup>5</sup>. 11, 12 and where this is the reason the patient wishes to regain the vocal quality before the development of their symptoms. Furthermore, in our experience, the result of surgical treatment to improve voice quality is better in submucosal cysts than in sulci.

### Vocal Pathologies of Difficult Diagnosis - ScienceDirect

Abstract The effectiveness of surgical treatment for vocal fold atrophy of various causes was examined. Type I thyroplasty was performed on 31 patients with vocal fold atrophy, often bilaterally and occasionally combined with type III thyroplasty. Of these 31 patients, 3 patients underwent the operation twice, for a total of 34 operations.

### Vocal fold atrophy and its surgical treatment

Abstract. Nonneoplastic vocal fold lesions are common that can cause hoarseness and voice change. Reactive lesions of Reinke's space can be observed in all ages and genders and comprise the majority of the benign nonneoplastic vocal fold lesions.

Diagnosis of vocal cord paralysis involves workup via fiberoptopharyngolaryngoscopy. Pulmonary function tests and acoustic analysis are adjunctive diagnostic modalities in the management of vocal cord immobility. Unilateral vocal cord immobility is more common than bilateral vocal cord immobility. Treatment of unilateral vocal cord immobility involves restoration of voice quality via several techniques including augmentation, medialization, and reinnervation.
