Branley.

[Why Is Water Important? | crayola.com](#)

2 The water cycle is constantly moving water. The sun evaporates water into the air from lakes and oceans. As the air is saturated and cooled, clouds form. Then the water falls to the ground as rain or snow. The water then flows into the ground to the water table, into lakes, rivers, and streams, and back to the ocean. Then the cycle starts again.

[Water cooler: LeVar Burton, other celebrities read to ...](#)

Water evaporates from oceans, lakes, and puddles, it condenses high up in the atmosphere, and then it falls back to Earth as rain, sleet, or snow. Even though the water on Earth is always moving, the total amount of water on Earth doesn't change. Water in a region can be tracked as it changes forms by something called a water budget.
