Fundamentals of Suspension & 4-Wheel Alignment

The wheel alignment is for aligning the vehicle wheels so as to operate all force equally, including friction, motional force etc, while riving the Vehicle. The vehicle aligned well prevents inclining toward one side during driving, wearing the tires abnormally, exhausting the excessive fuel and getting tired from driving.

4x8 WHEEL ALIGNMENT MANUAL - file.yzimgs.com

component failure. Wheel alignment is the proper adjustment of ALL the interrelated suspension angles. In alignment terminology, these adjustment angles are called caster, camber, toe-in, steering axis inclination (SAI), vehicle ride height and toe-out on turns. The method of checking wheel alignment will vary with the type of equipment being used.

There are two main types of 4-wheel alignments. In each case, the technician will place an instrument on all four wheels. In the first type the rear toe and tracking is checked, but all adjustments are made at the front wheels. This is done on vehicles that do not have adjustments on the rear. The second type is a full 4-wheel alignment where the

A Short Course on Wheel Alignment - Valley Buick Gmc

There are three main aspects to wheel alignment: camber, caster, and toe. By attaching special laser measuring equipment to the wheels it is possible to read the angles of these. Adjustments can then be made to the car's suspension and steering geometry, and with the laser alignment equipment still attached to the car, continue to be made until the settings are back to the factory ...

Wheel alignment sometimes referred to as breaking, or tracking is part of standard automobile maintenance that consists of adjusting the angles of wheels to the car manufacturer specifications. The purpose of these adjustments is to reduce tire wear and to ensure that vehicle travel is straight and true (without "pulling" to one side). Alignment angles can also be altered beyond the maker's ...
